# CT-OIL™

## EFFICIENT WORKING TIME

**Compacttilt™** offers a new patented solution: **CT-Oil™** - for automatic oil change

With **CT-Oil™** you save time on manual installation of hydraulic accessories such as pile drill, grap and forest claw.

**CT-Oil™** has the smart function that the quick couplings only come out when the tiltrotator has locked. In this way, you ensure a firm and safe connection of the hydraulic additional equipment.

### THE TILTROTATOR MAINTAINS ITS LIGHT WEIGHT

**CT-Oil™** consists of quick couplers that are located at the bottom on the outside of the tiltrotator - having the quick couplers on the outside makes it easier to:

- ✓ Connect additional hydraulic equipment
- ✓ Remove soil, sand, gravel etc.
- ✓ Change quick couplings if necessary.

**CT-Oil™** is an integrated and fixed solution that does not add additional weight to the machine. The quick couplings from **CT-Oil™** run in/out when activated from the cab, and in this way an easy and quick automatic oil change is achieved.

## CT-OIL™ - THE FIXED SOLUTION

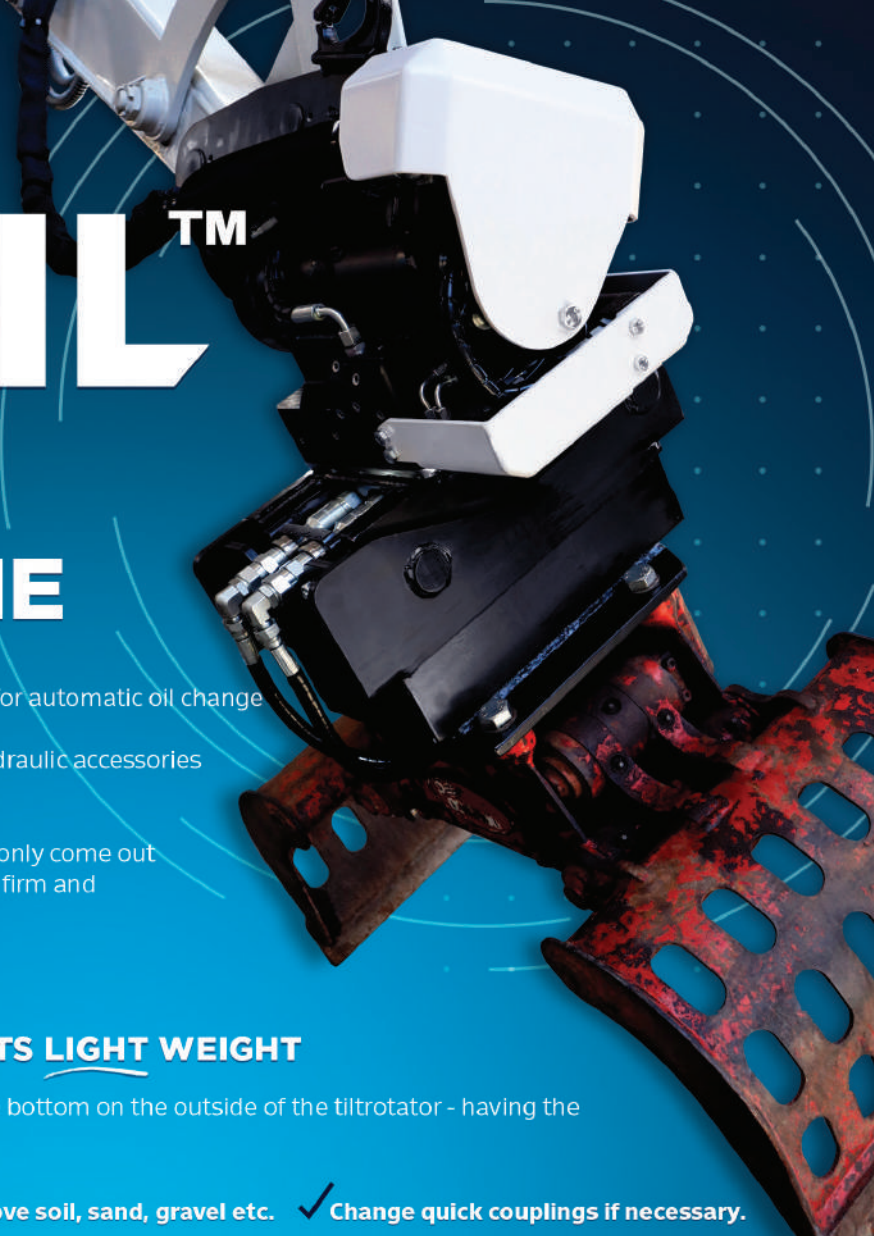

A **Compacttilt™** ensures a narrow design, low weight and a low installation height. Therefore, **Compacttilt™** is also created to be a fixed solution for the excavator.

With **CT-Oil™** installed for **Compacttilt™**, a fixed solution is achieved that will make work more efficient by eliminating manual connection of hydraulic extra equipment.

**CT-Oil™** can be fitted to all **CTR** configurations, and is therefore not depending on the operating system. **CT-Oil™** provides benefits such as:

- ✓ Automatic oil connection
- ✓ Easily accessible quick couplings
- ✓ Can be combined with different control systems

# CT-OIL™

## EASY CONNECTION OF HYDRAULIC EXTRA EQUIPMENT

With **CT-Oil™**, you get a patented solution that can connect more hydraulic extra equipment. The quick couplings are located in bottom on the outside of the tiltrotator, which gives more space for connecting the hydraulic auxiliary equipment.

It is possible to use **CT-Oil™** with manual coupling as well – thus minimizing the investment in neck mounts for equipment that rarely used.

## COMPACTTILT™ ADDS MORE FUNCTIONS AND BETTER OPERATING ECONOMY TO YOUR MACHINE

The weight of the equipment attached to the excavator is a primary factor in the maximum performance of the machine. Therefore it is important that the weight of the equipment is low. All **Compacttilt™** products have 2x50° tilt degrees.

**Compacttilt™** is developed to work in narrow trenches and under complex working conditions. Choosing with or without rotation on your **Compacttilt™** will be an assessment of the machine's work tasks. **Compacttilt™** offers a solution for all machines and tasks.
